

Sprint 2 Planning

Sprint Goals:

1. Have all data cleaned and scrapped. (Traffic, Weather, Dublin bus)
2. Connect a database through Django to react.
3. Create sample wireframes.

Turlough will focus on Dublin bus and TFI data analytics.

Maria will focus on the weather data analytics. Historical, Current and Forecasted.

Ciara will focus on getting the traffic data (response pending) and creating wireframes for the front end to better allow us to visualise what we want to achieve.

Adam will focus on frontend and backend setup to give us a basic app to test each feature out on as we develop.
